

A Note to Parents and Guardians

Your child is beginning an 8-week AI Literacy course. Here is what you need to know.

What Is This Course?

Your child's school is delivering the AI Literacy Curriculum — a structured 8-week programme that teaches students to understand, use, question, and act responsibly with Artificial Intelligence (AI).

This is not a computer science course. No coding is required. It is a thinking skills course for a world in which AI is already shaping how we learn, work, communicate, and make decisions.

5 Things Your Child Will Learn

Unit	What Your Child Learns	Final Product
1 — Discover	What AI is, how it works, and why it sometimes gets things wrong	Concept Map
2 — Learn	How to ask AI the right questions to get genuinely useful answers	Personal Study Plan
3 — Think	How to check whether what AI says is actually true	Fact-Check Report
4 — Create	How to produce original work with AI — without losing their own voice	Creative Project
5 — Act	How to use AI honestly, fairly, and with care for others	Ethical AI Pledge

What This Course Is — and Is Not

 This course IS...	 This course is NOT...
A thinking and ethics course that prepares students for a world shaped by AI	Permission to use AI for all schoolwork without oversight
Teaching students when to trust AI — and when to question it	Replacing any other subject or exam preparation
Building habits that will serve students in school, work, and civic life	Teaching students to rely on AI instead of their own thinking
Aligned with UNESCO, OECD, and ISTE international frameworks	A commercial promotion of any AI tool or company

Questions Parents Often Ask

Question	Answer
Will my child be using AI tools in class?	Yes — in a supervised, structured way. Students learn to use AI as a tool for thinking, not a substitute for it. All AI use in this course requires the student to think first, then use AI, then evaluate what it produced.

Will AI do my child's homework for them?	This course specifically addresses that question. One unit (Unit 4) is built around the idea that your child's voice, judgment, and creativity are irreplaceable — and cannot be delegated to AI.
Is there a risk my child will become dependent on AI?	The opposite is the goal. Students who complete this course are significantly better equipped to resist AI dependency, because they understand what AI cannot do and why thinking for themselves still matters.
What about online safety and privacy?	The course covers data privacy and responsible online behaviour in Unit 5. Students are taught never to share personal information with AI tools.
Will there be grades or exams?	Each unit ends with a small project (see the table above). These are assessed on thinking quality, not technical skills. There are no written exams.

How You Can Support Your Child at Home

The single most powerful thing you can do: ask your child to explain something to you. If they can teach it, they have understood it.

Week 1	Ask: "What is the difference between AI and Google? Can you explain it to me?" If they can, they have understood Unit 1.
Week 3–4	Try this together: ask the same question to Google and to an AI tool. Ask your child: "Which answer do you trust more, and why?"
Week 6–7	Ask to see their creative project. Ask: "Which part of this is entirely yours — not AI's?" If they can point to it and explain it, they have understood Unit 4.
Week 8	Ask to read their Ethical AI Pledge. Ask: "Which commitment do you think will be hardest to keep?" This is the most important conversation in the course.
